

# The photo chronicles

Made by Quinn Lutters

# Welcome to my photo book

In this photo book I'm showing my best finds and best pictures from the past few months from my photography journey

This was my first time using a camera and a camera when you've never used one can be pretty intimidating.

I have been using the canon EOS 550D and it serves me pretty well. While using it I found soem things that can really help to make a certain cenery work. Using things like Exposure compen-cation adn white balance to allow for more light and brightness and burst some life into your pictures. I recommend new photographers to use either AV or TV mode, depending on which onje you know best

This allows you to first gain an insight on how one thing can change your picture and you can slowly start to change other stuff to see how your picture will change.

I was really surprised, while I was taking this picture, because I find it really interesting how light can influence the color of object and how that can affect the feel of the picture.

While we were messing around with lego bricks and shutter speeds I found that while some bricks can be really sharp others can be vague and almost transparent depending on your shutter speed, which can give a really cool effect.

I was taking pictures while changing the ISO to make noise pictures, but I found out that you can get really bright pictures, when you use a high ISO and this and the noise can provide a course feeling to your picture.
